CANARYTRAP

Catching Vulnerabilities & Trapping Exploits

Canary Trap's elite team of security experts come armed with the tools, experience and credentials to help improve your organization's security resiliency and cyber risk posture.

CLOUD CONFIGURATION REVIEW

Assess the security settings and configurations within your cloud environments.

SERVICE OVERVIEW

As enterprises continue to accelerate their "Cloud First Strategy," security practitioners must ensure the security and resilience of your organization's cloud infrastructure.

Canary Trap's Cloud Configuration Review (CCR) provides valuable insights into how effective the cloud application is at using the available security controls to protect workloads. Our Subject Matter Experts (SMEs) identify misconfigurations and vulnerabilities that present a potential cyber risk.

We assess the impact and severity of the identified risks. Canary Trap's SMEs will commence a thorough risk evaluation process. Each identified vulnerability is assessed against the potential risk and impact to your organization. Risks are prioritized based on their potential to compromise your data, disrupt business services, or otherwise expose the cloud environment to potential threats.

Canary Trap will then compile a comprehensive Report of Findings, which serves to provide a clear view into the vulnerabilities and weaknesses within your cloud infrastructure. We will report on any misconfigurations, deployment mistakes, and architectural flaws that are likely to introduce security risks over time.

Undertaking a CCR will help you to proactively identify and address security gaps within your cloud infrastructure, optimize resource utilization, and maintain a secure cloud environment.

Canary Trap combines human expertise with sophisticated tools, proven methodologies and, where appropriate, threat intelligence to ensure a thorough, in-depth approach to security testing, advisory and assessments.

Engage Canary Trap Specialists

Complete our Scoping Questionnaire at www.canarytrap.com or Contact Us directly by telephone or email.

Report of Findings

Canary Trap will deliver a Report of Findings highlighting any identified vulnerabilities for remediation.

The Canary Trap Approach

✓ **Step 1:** Define
✓ **Step 2:** Assess
✓ **Step 3:** Report
✓ **Step 4:** Remediate
